Current and Expected Future Leadtime Adjustments on Switchboards and Panelboards

Dear Valued Partner,

The demand for switchgear, panelboards, switchboards, and busduct continues to be at the strongest levels in recent memory. Thank you for being a valued partner during these ever-changing times. As orders continue to flow at a record pace, we are proactively adjusting lead times for all orders not released by May 31st, 2022, to the following:

SB1 – 32 weeks

SB2 – 39 weeks

SB3 – 41 weeks

P5 – 32 weeks

For clarity these are lead times after release not lead time from order entry. These adjustments are to ensure we meet expectations on delivery. Given the current market conditions, we may need to adjust lead times on June 13th with an additional 4-week adjustment outward on switchboards and 2-4 weeks on P2-P5 panelboards. The lead times may not end changing on June 13th, but we wanted to provide this additional visibility to plan future orders and releases accordingly. We will continue to update regularly on the changes to lead times. Any orders already released are not affected by this adjustment in lead times.

With best regards,

Siemens Smart Infrastructure Electrical Products
